WORKING RANGES

SUPPLEMENTAL DATA

 Ratings according to Japanese construction codes for mobile cranes.

The crane rated loads are including the weight of hooks and other lifting gears.

Values marked with _____ are decided according to strength of the machine.

Other values are decided according to stability of the machine.

Type of hook	75 t	32 t	7 t	7 t Lightweight type
Weight	800 kg	500 kg	160 kg	60 kg

When uses of the lightweight hook, it may not be lowered depending on the boom length, boom angle and/or the hook height.

In case of the hook is not lowered, add the suitable weights adjusted up to the weight of the ball hook.

- 2. Even when it is intended to lift a crane rated load, the operator shall be responsible for ensuring safety depending on the actual condition such as reducing of the load and reduction of a working speed, if applicable conditions such as influence of the wind, ground condition, working speed and others are likely to cause safety problems.
- A working radius shall mean a horizontal distance from the center line of center of rotation of the crane to the center of gravity of the load to be lifted.

The working radius is based on an actual value with the factor of defection of the boom taken into considerations.

Thus, be sure to conduct the crane work while referencing the working radius.

- 4. Be sure to keep the crawler frame extended up to the specified position during execution of the crane work.
- The rated capacity of the auxiliary sheave shall be equal to the rated capacity of the boom minus the weight of the hook used for the main lift, and shall be limited to 7,000 kg.
- As to the crane rated loads of third drum (with free fall), the crane rated loads of the boom applies, but the limit shall be (a single part of line) 7,000 kg.
- As to the crane rated loads of third drum (without free fall), the crane rated loads of the boom applies, but the limit shall be (a single part of line) 5,300 kg.

- When the boom length is in excess of the specified value, conduct the crane work under a rated crane load of the boom of the specified length or a boom of one stage above, whichever is smaller.
- Where no value is given in the columns of the crane rated loads chart, no execution of work is allowed.
 (If the boom should be inclined to an angle smaller than the minimum boom angle, be fully careful, since the base machine could overturn with no load.)
- 10. The minimum number of parts line of the main hook in the main winch lifting is decided within a range not to exceed the value of 7,000 kg per single wire rope.

The standard numbers of parts line by boom length are as shown below.

Boom length : m	11.6	19.4	23.3	27.2	32.5	35.0
Hook : t	75		32			
Number of parts line	11	6	4	4	4	4

11. The minimum number of part lines of the main hook in the third (with free fall) drum winch lifting is decided within a range not to exceed the value of 7,000 kg per single wire rope.

The standard numbers of parts line by boom length are as shown below.

Boom length : m	11.6 19.4		23.3	27.2	32.5	35.0
Hook : t	75		32			
Number of parts line	10	6	4	4	4	4

12. The minimum number of part lines of the main hook in the third (without free fall) drum winch lifting is decided within a range not to exceed the value of 5,300 kg per single wire rope.

The standard numbers of parts line by boom length are as shown below.

Boom length : m	11.6	19.4	23.3	27.2	32.5	35.0
Hook : t	75		32			
Number of parts line	6	6	4	4	4	4

13. To prevent a load being lifted and carried from falling due to wrong operation or others, do not perform a free fall work in the crane work.
